

TAPERED FISHING TAP

FOR FISHING BOTTOM HOLE PUMPS AND PARTS:

The Baird fishing tap is heat treated and hardened to cut its own threads.

The Tap is offered in an extensive range of sizes varying from 1-3/8" to 2-1/4". Sizes are graduated by quarters of an inch with the point of all sizes standardized at 3/8". With this range, a tap may be selected with enters the barrel to fish a pull tube, or of sufficient diameter to fish the barrel.

When fishing for a cage on top of a standing tube, it may be necessary to cut off the point of the tap if contact with cage is prevented by premature ball engagement by the lower end of the tap.

MAX. DIA. - A	S.R. PIN SIZE	PART NO.
1-3/8"	15/16"	226-2001
1-5/8"	1-1/16"	226-2002
